

CRITICAL STATE SOIL MECHANICS

CRITICAL STATE SOIL MECHANIC

Volume 1 – TENSOR, STRESS INVARIANTS and ELASTICITY..... CSM1-1

1. Introduction	CSM1-2
• <i>Traditional Soil Mechanics</i>	
• <i>Errors</i>	
2. Stress and Strain.....	CSM1-6
3. Principal Stresses	CSM1-11
4. Stress Invariants	CSM1-12
5. Cartesian Tensor	CSM1-18
6. Strain Tensor	CSM1-21
7. Summary	CSM1-25
8. Elasticity	CSM1-28
9. References.....	CSM1-38

Volume 2 – THEORY OF PLASTICITY..... CSM2-1

1. Yielding vs Failure	CSM2-2
2. Orthogonal Axes of Stresses	CSM2-3
3. Failure Surface of Metals	CSM2-3
4. Von Misses Failure Criterion	CSM2-4
5. Failure Surface of Soils	CSM2-4
6. Various Failure Criterion	CSM2-5
7. Failure and Yield Function.....	CSM2-6
8. Formulation of Yield Function	CSM2-8
9. Work Equation	CSM2-9
10. Critical State	CSM2-11
11. Positive and Negative Pore Pressures	CSM2-14
12. Henkel Formulation	CSM2-15
13. Rendulic Work.....	CSM2-17
14. Hvorslev Work.....	CSM2-17
15. Combining Henkel, Rendulic & Hvorslev works.....	CSM2-18
16. Roscoe and Bishop	CSM2-21
17. OC Samples Fail at Hvorslev Surface.....	CSM2-22
18. Normalized Stress Path	CSM2-23
19. References	CSM2-29

Volume 3 – STRESS PATH & BEHAVIOR OF SOIL..... CSM3-1

1. Stress Path	CSM3-2
• Equation of undrained stress path	
• Converting 3D into 2D curve	
• Drained vs undrained path	

- Normalizing the stress path
- Undrained is important in soft clay
- Drained is important in highly over-consolidated clay
- Calculating strain increment

2. Trend in the Basic Behavior of Soil CSM3-8

- Observing trends in soil test
- Calculating strain
- Traditional undrained test
- Traditional drained test
- Constant P drained test
- Presenting test results
- Drained path: undrained + consolidation

3. Time to Failure in Undrained Test CSM3-19

4. Time to Failure in Drained Test..... CSM3-21

5. Stress Controlled Test CSM3-24

6. Anisotropic Consolidation Test CSM3-26

7. Change of Water Content and Void Ratio CSM3-29

8. Incremental Stress Strain Theory..... CSM3-34

- Undrained test
- Anisotropic consolidation test
- Volumetric strain and shear strain in a drained test
- Example of calculation

9. References CSM3-43

Volume 4 – MATERIAL BEHAVIOR, FLOW RULE CSM4-1

1. Material Behavior CSM4-2

- Elastic, plastic, viscous behavior
- Combined model behavior
- Time independent behavior – 1st order quantity
- Time Dependent behavior - 2nd order Quantity
- Postulation
- Elasto-plastic behavior
- Hysteresis loop behavior
- Incremental stresses / strains
- Strains in soils: elastic and plastic Strains
- Steel has a well-defined elastic behavior
- Strain hardening material
- Strain softening material
- Effects of confining pressures
- Effects of void ratios

• Yield Locus	
2. Flow Rule.....	CSM4-13
• Flow rule concept	
• Associated flow rule	
• Non-associated flow rule	
• Plastic potential curve	
• Associated vs non-associated flow rule	
• Critical State Condition	
3. Critical State and Work Equation.....	CSM4-17
4. Modified Camclay Theory for Calculating Volumetric and Distortional Strain	CSM4-25
5. Relation of M and ϕ'	CSM4-42
6. Closure	CSM4-44
• Features of soil behavior	
• Constitutive soil model	
• Some constitutive models in PLAXIS	
7. References	CSM4-46
